

A diagram depiction rendering of inter-linked *Sensory-Motor Learning Models* to represent the neurocognitive processes involved in the systemic adjustment and modification of *Working Body Schema* during *Virtual Reality Bones™* (VRB³) techniques and some matched pairings of *Feldenkrais Method®*-based metacognitive applications through movement...all in conjunction with artful intent to avoid or negate the provocation of usual pain production, regionally nociceptive movement pathways that are in direct anatomical and perceptual association with chronic or recurring low back pain.
